

**Project Development Phase
Performance Test**

Date	28 June 2025
Team ID	LTVIP2025TMID35333
Project Name	Revolutionizing Liver Care: Predicting Liver Cirrhosis using Advanced Machine Learning Techniques
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values
1.	Model Summary	<p>1. Objective To develop a predictive model that classifies whether a patient is likely to have liver cirrhosis based on clinical and biochemical features.</p> <hr/> <p>2. Input Features (Example)</p> <ul style="list-style-type: none">• Age• Gender• Total Bilirubin• Direct Bilirubin• Alkaline Phosphatase (ALP)• Alanine Aminotransferase (ALT)• Aspartate Aminotransferase (AST)• Total Proteins• Albumin• Albumin and Globulin Ratio• INR (International Normalized Ratio) <i>(if available)</i> <hr/> <p>3. Dataset Used</p> <ul style="list-style-type: none">• Source: ILPD (Indian Liver Patient Dataset) or a similar publicly available liver disease dataset• Size: ~500 to 1,000 patient records• Labels: Cirrhosis = Yes / No (Binary Classification) <hr/> <p>4. Algorithms Considered</p> <ul style="list-style-type: none">• Logistic Regression• Random Forest• Support Vector Machine (SVM)• XGBoost• Gradient Boosting• Neural Networks <i>(optional based on complexity)</i> <hr/>

		<div>5. Selected Model</div> <ul style="list-style-type: none">Random Forest Classifier (or XGBoost for higher performance)Chosen due to its high accuracy, robustness to missing data, and feature importance interpretability. <hr/> <div>6. Evaluation Metrics</div> <table><tr><th>Metric</th><th>Value (Example)</th></tr><tr><td>Accuracy</td><td>90–95%</td></tr><tr><td>Precision</td><td>91%</td></tr><tr><td>Recall (Sensitivity)</td><td>92%</td></tr><tr><td>F1-Score</td><td>91%</td></tr><tr><td>AUC-ROC Score</td><td>> 0.93</td></tr></table> <hr/> <div>7. Model Interpretation</div> <ul style="list-style-type: none">Feature importance is analyzed using SHAP or LIME for transparency.Doctors can view why a prediction was made based on contributing medical features. <hr/> <div>8. Deployment</div> <ul style="list-style-type: none">Model is deployed as a REST API using Flask/FastAPI.Integrated into a web-based UI for doctors to input patient data and view prediction results instantly. <hr/> <div>9. Retraining Strategy</div> <ul style="list-style-type: none">Scheduled or trigger-based retraining using newly collected anonymized data.Version control is maintained for all model updates. <hr/> <div>10. Outcome</div> <ul style="list-style-type: none">Predicts whether a patient is at high risk or low risk of liver cirrhosis.Assists in early diagnosis and supports clinical decision-making.	Metric	Value (Example)	Accuracy	90–95%	Precision	91%	Recall (Sensitivity)	92%	F1-Score	91%	AUC-ROC Score	> 0.93
Metric	Value (Example)													
Accuracy	90–95%													
Precision	91%													
Recall (Sensitivity)	92%													
F1-Score	91%													
AUC-ROC Score	> 0.93													
2.	Accuracy	<div>Training Accuracy</div> <div>1. Dataset Used</div> <ul style="list-style-type: none">Name: Indian Liver Patient Dataset (ILPD) or similar liver disease datasetTotal Records: ~583 samplesTarget Variable: Liver Cirrhosis (Yes/No)Split Ratio: 80% Training, 20% Testing (or cross-validation) <hr/> <div>2. Selected Algorithm</div> <ul style="list-style-type: none">Model: Random Forest Classifier (<i>preferred for accuracy and robustness</i>)												

	<div><ul style="list-style-type: none">Other tested models: Logistic Regression, SVM, XGBoost<hr/><div>3. Accuracy Results (Example Values)<table><tr><th>Metric</th><th>Value (%)</th></tr><tr><td>Training Accuracy</td><td>96%</td></tr><tr><td>Testing Accuracy</td><td>91%</td></tr><tr><td>Precision</td><td>91%</td></tr><tr><td>Recall (Sensitivity)</td><td>92%</td></tr><tr><td>F1-Score</td><td>91%</td></tr><tr><td>ROC-AUC Score</td><td>0.93+</td></tr></table></div><hr/><div>4. Cross-Validation Accuracy<ul style="list-style-type: none">K-Fold Cross Validation (k=5 or 10)Average Accuracy: ~90–92%Confirms that the model generalizes well across different data splits.</div><hr/><div>5. Observations<ul style="list-style-type: none">High training and testing accuracy indicate good model fit with minimal overfitting.Balanced precision and recall ensure reliability in medical predictions.Random Forest or XGBoost showed the best performance compared to other models.</div><div>Validation Accuracy<div>1. Validation Strategy<ul style="list-style-type: none">Method Used: K-Fold Cross-Validation (commonly K=5 or K=10)Purpose: To test the model’s ability to generalize to unseen data by training and validating it across multiple subsets of the dataset.</div><hr/><div>2. Validation Accuracy Results (Example)<table><tr><th>Model</th><th>Average Validation Accuracy</th></tr><tr><td>Random Forest</td><td>91.2%</td></tr><tr><td>XGBoost</td><td>92.4%</td></tr><tr><td>Logistic Regression</td><td>85.7%</td></tr><tr><td>SVM</td><td>88.9%</td></tr></table><p><i>(Values may vary slightly depending on dataset used and preprocessing techniques.)</i></p></div><hr/><div>3. Additional Validation Metrics (Random Forest Example)</div></div></div>	Metric	Value (%)	Training Accuracy	96%	Testing Accuracy	91%	Precision	91%	Recall (Sensitivity)	92%	F1-Score	91%	ROC-AUC Score	0.93+	Model	Average Validation Accuracy	Random Forest	91.2%	XGBoost	92.4%	Logistic Regression	85.7%	SVM	88.9%
